

KF Series T Ball Valves

KF Industries

Superior Fluid Control Products for the Petrochemical and Industrial Markets

A division of **CIRCOR** International, Inc.

Series T Ball Valves

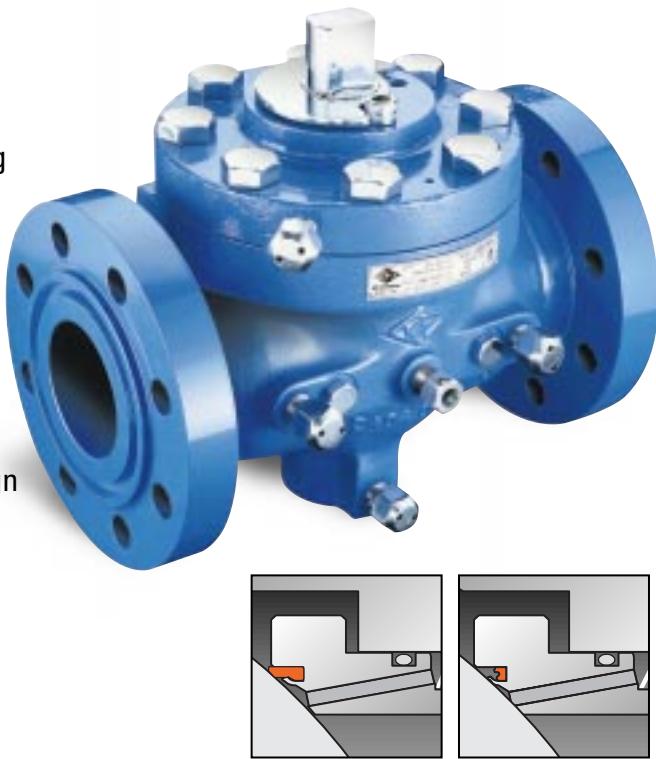

This top entry valve with a one-piece trunnion supported ball conforms to API specifications 6A, 6D and ANSI B16.34. Devlon® seats are standard. All seats are retained in metal holders which are spring-loaded against the ball for low pressure, firesafe sealing.

Series T valves are offered in:

2" thru 16" class 600,
2" thru 12" class 900, 1500 and 2500,
2" thru 7 1/16" API 6A class 2000, 3000 and 5000.

General Design Features

- One-piece flanged top-entry trunnion design
- Double block and bleed
- One-piece ball and stem assures precise positioning
- Anti blowout one-piece ball/stem design
- O-rings plus firesafe packing prevents leakage
- Corrosion resistant low friction bearings
- Inconel wave springs provide upstream and downstream sealing
- Stainless Steel Sealant injection fittings for emergency stem or seat sealing
- Inline repairable due to patented seat retainer design
- Minimized torque required to open and close valve
- Anti-static grounding between ball, stem and body
- Integral top works direct mounting pad
- 8" & larger valves are equipped with lifting lugs
- ANSI B16.34
- API 6D, API 6A, 607 and 6FA
- NACE MR0175
- CSA -Z245.15-01
- CE Marked (P.E.D. 97/23/EC, Cat. 3)

Firesafe Function

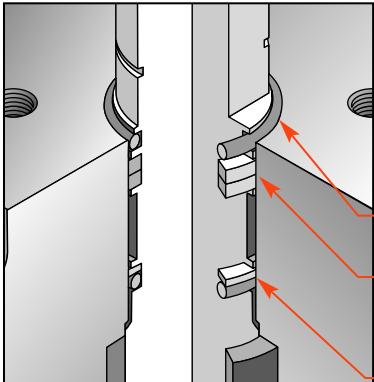

In case of fire and seat construction damage, firesafe requirements are accomplished with automatic metal-to-metal positive sealing.

Firesafe Standard Seal

2" - 6" Class 600 -1500
14" - 16" Class 600
All Sizes Class 2500

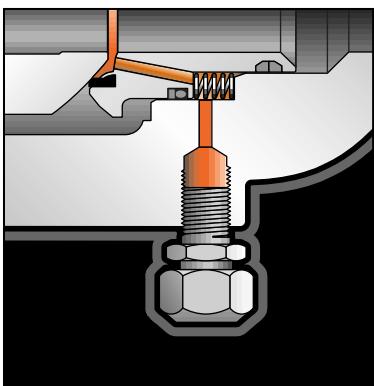

Firesafe Standard Seal

8"- 12" Class 600 -1500

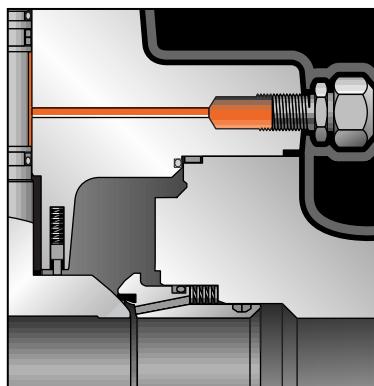

Note: Details for lower stem configuration on page 8.

Secondary Stem Seal

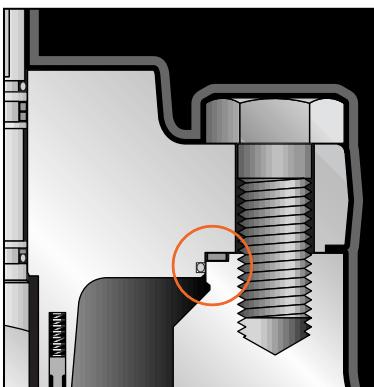

Emergency Seat Seal

Special sealants may be injected into fittings that are located on the adapter flanges to restore sealing integrity if seat sealing surface is damaged. A second internal check valve provides backup to the fitting.

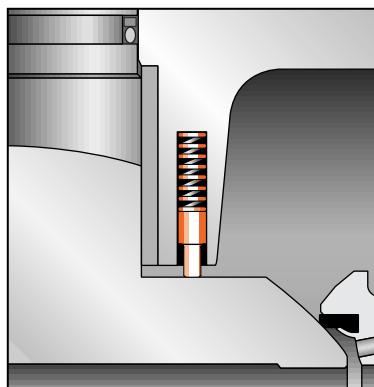

Emergency Sealant Injection System

The Sealant Injection System located on the bonnet can be utilized in case of emergencies, o-ring damage, or if stem leakage occurs.

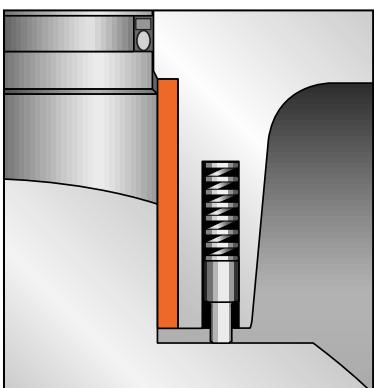

Double Sealed Envelope Connections

Double o-rings or a combination of an o-ring and Fire-Safe gasket on body/bonnet connections to ensure positive sealing. This makes the Series T suitable for above or below ground service.

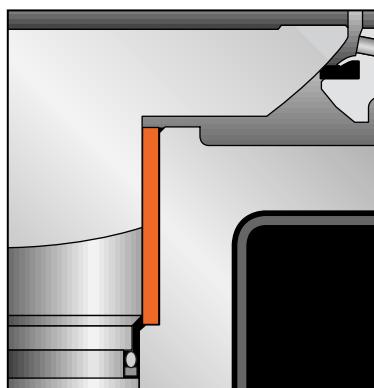

Antistatic Device

A spring between the bonnet and the ball permits electrical continuity.

Heavy Duty Bearings

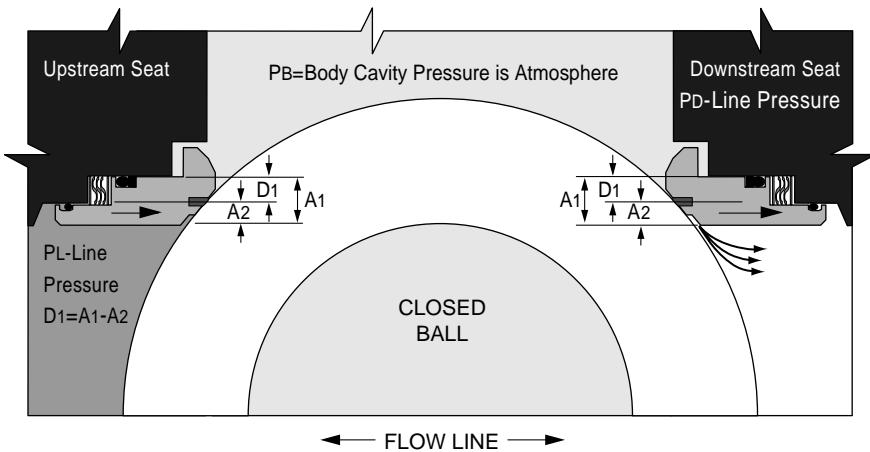

Heavy-duty PTFE lined bearing eliminates the need of lubricating stem and trunnion journals, resulting in smooth and easy operation of valve. Upper stem and lower trunnion bearings balance the pressure load on the ball by reducing friction between ball and seat.

Garfil epoxy bearing with PTFE filler is standard in 2" through 6" in Class 600, 900 & 1500 and 8", 10" & 12" Class 600 & 900. A Garloc DU bearing with PTFE liner is standard in 8", 10" & 12" Class 1500 and 2" through 12" Class 2500.

Technical Seating Features

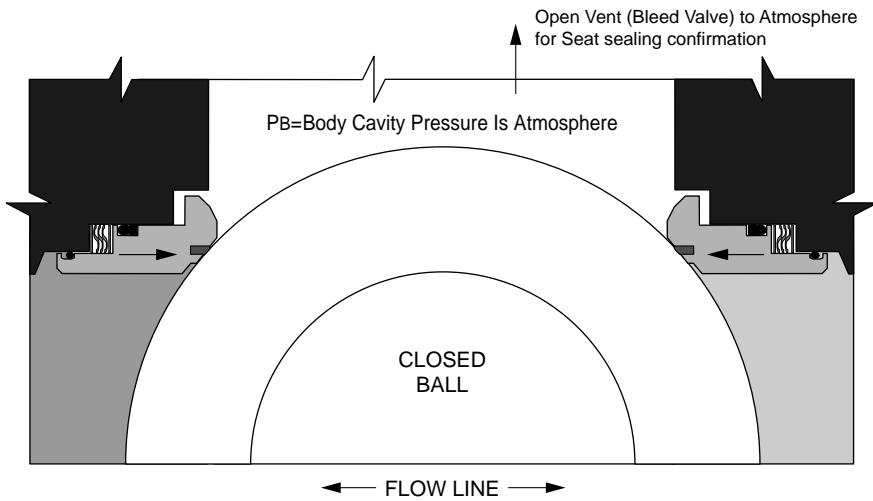

Self Relieving Seat Design

Upstream Seat: The difference in the area (D_1) times the line pressure creates a “piston effect” which forces the seat against the ball surface. Also the springs behind the seat adds the force to the seat which keeps the seat in contact with the ball surface by providing the tight seal.

Downstream Seat: When the body cavity pressure exceeds the spring pressure, automatic pressure relief will occur by relieving the body cavity pressure past the downstream seat. This eliminates the need for the body relief valve.

Double Block and Bleed

The double block and bleed condition is available in all seat design configurations. When the ball is in the closed position the body cavity pressure may be drained down to ‘zero’ by opening the bleed valve and draining the fluid by removing the drain plug. Each seat works independently assuring tight shut off seal against ball on the upstream and downstream side.

KF Series T Applicable Standards

The following list contains the most important applicable standards for ball valves. KF valves may be designed,

manufactured and tested in accordance with other international standards on request.

API-American Petroleum Institute

- Spec. 6A** Specification for wellhead and Christmas tree equipment.
- Spec. 6D** Specification for pipeline valves.
- Spec. RP6F** Recommended practice for fire testing of valves.
- Spec. 6FA** Specification for fire testing of valves.
- Std. 598** Valve inspection and test.
- Std. 605** Large diameter carbon steel flanges.
- Std. 607** Fire test for soft seated quarter-turn valves.

ASME/ANSI-American National Standard

- B 16.5** Steel pipe flanges and flanged fittings.
- B 16.10** Face-to-face and end-to-end dimensions of ferrous valves.
- B 16.25** Butt welding ends.
- B 16.34** Steel valves- Flanged and butt welding ends.
- B 31.3** Chemical plant and petroleum refinery piping
- B 31.4** Liquid petroleum transportation piping systems.
- B 31.8** Gas transmission and distribution piping systems.

ASTM-American Society for Testing Materials

British Standard

- BS 1503** Specification for steel forgings for pressure purposes.
- BS 1504** Specification for steel castings for pressure purposes.
- BS 1560** Steel pipe flanges and flanged fittings.
- BS 2080** Face-to-face, center-to-face, end-to-end, and center-to-end dimensions of flanged and butt-welding end steel valves for the petroleum, petrochemical and allied industries.

British Standard-cont.

- BS 4504** Flanges and boltings for pipes, valves and fittings.
- BS 5146** Inspection and test of steel valves for the petroleum, petrochemical and allied industries.
- BS 5351** Steel ball valves for the petroleum, petrochemical and allied industries.
- BS 5750** Quality system.
- BS 6755** Testing of valves.

EC-European Community

- CE Marked** (P.E.D. 97/23/EC, Cat. 3)

ISO-International Organization for Standardization

- ISO 9001:2000** Quality systems- Model for quality assurance in design/development, production, installation and servicing.

MSS-Manufacturers Standardization Society

- SP 6** Standard finishes for contact faces of pipe flanges and connecting - end flanges of valves and fittings.
- SP 25** Standard marking system for valves, fittings, flanges and unions.
- SP 44** Steel pipeline flanges.
- SP 45** By-pass and drain connection standard.
- SP 55** Quality standard for steel castings- visual method.
- SP 61** Hydrostatic testing of steel valves.
- SP 72** Ball valves with flanged or butt-welding ends for general service.

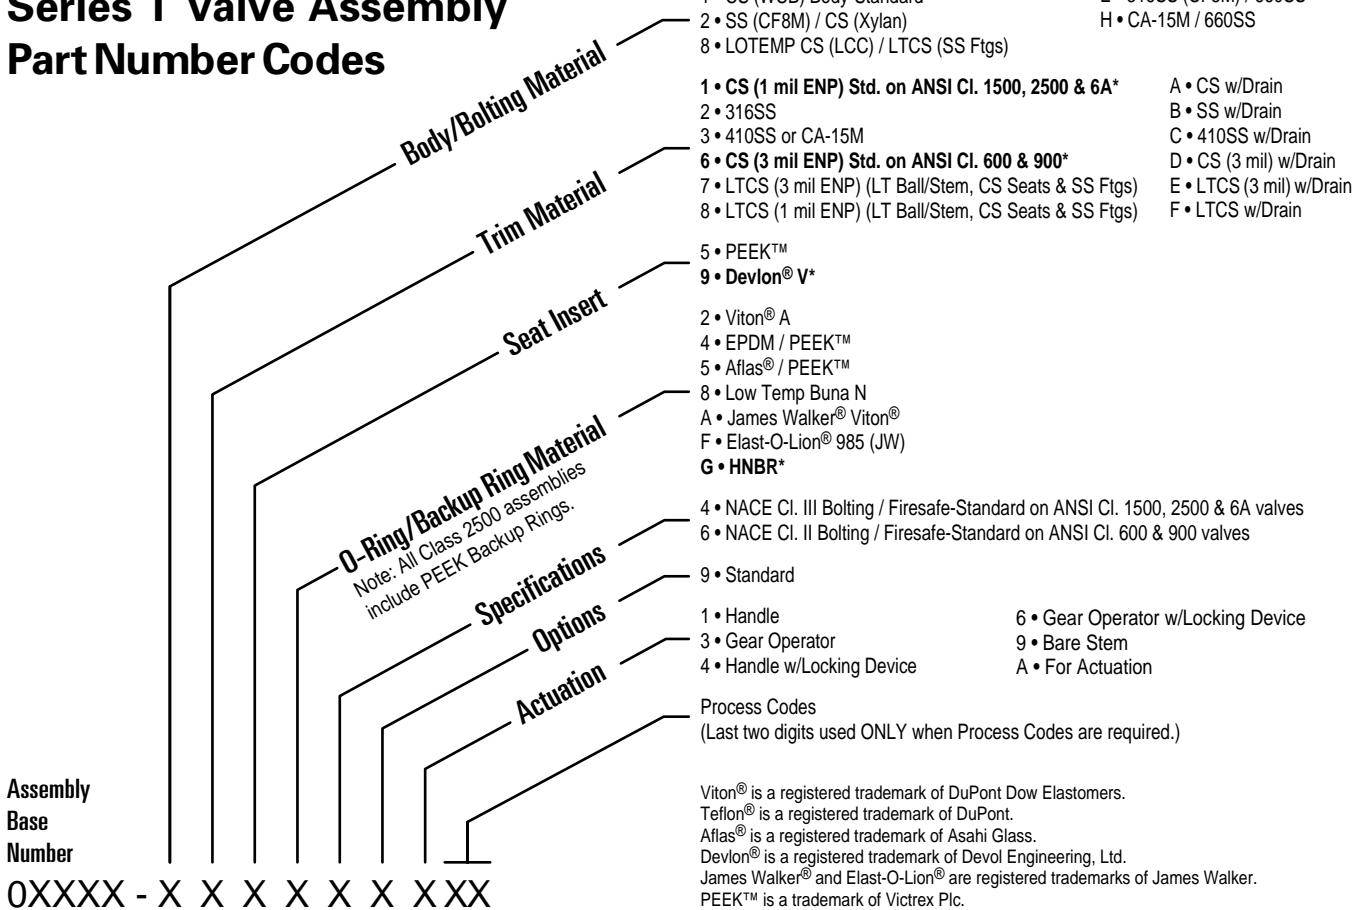

NACE-National Association of Corrosion Engineers

- MR0175** Sulfide stress cracking resistant metallic materials for oil field equipment.

40	Internal Ball Check
41*	Trunnion Cover O-Ring

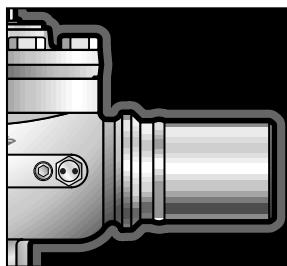

* Recommended spare parts where applicable

† Not used in 8"FP and larger assemblies.

†† 8" and larger use double stem seals.

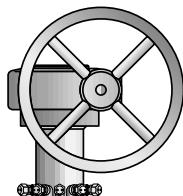

KF Series T Optional Features

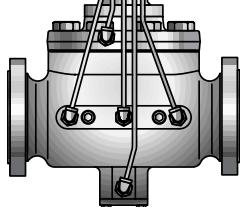

Pups

Butt Weld valves may be supplied with transition pieces (PUPS) to avoid any risk of seat and seal damage during welding and post weld heat treatment operations. Length of pups and type of pipe and grade to be specified by customer.

Extensions

KF Series T ball valves are available for below ground or buried service with fully operational extensions to meet your specifications. Body Bleed and Sealant Injection functions are maintained along with total valve control by manual or powered actuators. Extension dimensions for Gear Operator or Actuator are given with reference from the valve center line to the center of hand wheel.

Installation

Flange Ends (RF & RTJ):

- Series T Ball Valves may be mounted in either vertical or horizontal piping systems. The stem may be positioned vertically or horizontally.
- Mating flanges must be correctly aligned. Alignment includes bolt hole placement, parallelism, and perpendicularity.
- Use proper size gasket or RTJ metal seal. Flange studs or bolting must be correct size and properly tightened.
- Properly constructed piping systems do not cause undue stress in valve assemblies. Valves are not intended to make up for insufficient pipe tolerances.

Weld Ends (WE):

- Keep ball in open position prior to installation/welding of KF Series T Weld End Ball Valve.
- Place the valve in position by aligning Weld Ends to the pipe. Prior to welding it is imperative that all welding surfaces be clean from contamination such as dirt, dust and grease which may affect weld performance.

Actuators

The bonnet design on KF Series T Ball Valves permits easy adaptation to mount manual, electric, hydraulic, or pneumatic actuators.

Tar Set Coating

KF Series T ball valves can be Tar Set coated for added corrosion protection to meet specific application requirements. Tar Set coating is available upon request. Ask your KF Industries representative for more information on this special coating process.

Metal Seated Ball Valves

KF Series T Metal Seated ball valves have been designed to provide a reliable, efficient and safe method to handle services where high temperatures and/or the presence of solid particles in the fluid make it impossible, or not recommended, to use soft seated ball valves.

Sub-Sea Options: Sub-Sea valves are optionally available with CoalTar Epoxy Coating (18 to 20 mils), Xylan Coated Bolting and Sub-Sea Gear Operators.

Caution: During the welding process, valve body temperatures should be monitored around the circumference at a location in line with the sealant injection fittings. The temperatures at this plane should be checked with Temperature Stick or other reliable temperature indicator and not allowed to exceed 300°F. This precaution is necessary to assure that non-metallic seals do not suffer heat damage.

- Tack weld valve in position and check for proper alignment.
- Finish weld following proper weld procedure for material grade and condition, and the above Caution.

Worldwide Sales Offices

**KF Industries and its sister companies in the CIRCOR Energy Products Group
reach into every corner of the globe serving the oil & gas and industrial marketplace.
Supplying an extensive range of product offerings
through a worldwide network of manufacturer representatives and distributors,
KF Industries is the right choice for all your flow control needs.**
